Special product: Due to hand-manufactured process the caliber and tonality of these borders could vary from one to other. Clean only using neutral PH products.

Producto especial: Este material se fabrica artesanalmente, por lo que pueden existir pequeñas variaciones en el calibre o en el tono. Usar para la limpieza únicamente productos con PH neutro.

Pvd consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface. Advantages: High resistance to abrasion and scratches; much higher than metals applied by firing. Corrosion resistant. ISO 9227. Clean: any non-aggressive, pH neutral product have to be used.

PVD consiste en depositar capas de átomos, en una cámara de alto vacío, sobre una superficie sólida. El recubrimiento se produce por la condensación de un metal vaporizado, oro, titanio, platino, ect. sobre el material a recubrir. Ventajas: Mayor resistencia al rayado y a la abrasión que los metales aplicados por cocción. Resistente a la corrosión : ISO 9227. Limpieza: utilizar productos no agresivos con pH neutro.
